Who we are?

[Nagish](#) ('Accessible' in Hebrew), based in New York City, was founded in 2019. Nagish develops cutting-edge tech to **make communication better and more accessible to people who are Deaf, Hard of Hearing, or to people with speech impediments.**

Our suite of products are used daily by thousands of people and large enterprises

Our Values:

At Nagish, we are building a communication bridge between people. In our vision, a bridge consists of the following:

- It is strong, reliable, and scalable.
- It is beautiful and intuitive. Every detail matters.
- It is made for all. Meaning it's accessible.
- It connects people and cultures.

Project Idea #1

Title: Research and development of better methods to assess captioning quality in real-time.

Project Description: Nagish is constantly researching and developing new captioning technologies to provide the best possible solution for our end users who are Deaf/HoH. We would like to build a corpus of audio + captions and use it to research the performance of publicly available captioning engines as well as the Nagish captioning engine. The findings of this study will directly impact the quality of the Nagish suite of products.

Keywords: Captioning, Artificial Intelligence, Accessibility Tech

Tools: Data Curation and Analysis, Statistics, Excel, Python (Optional)

Preferences: None

Citizenship: Open to all students
